BUTTERFLY BUSH

The Everblooming Butterfly Bush

SPECIAL MERITS

1. Very hardy
2. Blooms the first season
3. Flowers from early summer till frost
4. Rich, striking color
5. Splendid for cutting
6. Very free flowering

THE NAME BUTTERFLY BUSH was applied to it because it seems to attract butterflies in large numbers. From a young plant set out either in the Spring or Fall it will mature to full size the first Summer, producing a handsome bush, which the first year often attains a height of four feet. It produces long, graceful stems, of beautiful lilac-colored flowers that are of miniature size and borne by the hundreds on a flower head which is frequently 10 inches long. A single plant the first season will throw out as many as 50 flower spikes, which increase greatly in number during succeeding years. The year after planting it generally commences to flower in June and continuing each season until severe frosts nip it. We recommend covering the roots with leaves or other suitable material as winter approaches, as this will produce a heavy growth the following season. It is very desirable as an individual specimen in the lawn and garden.
